

'Soapy Soap'

Help your friends wash their hands

Washroom hygiene and cleanliness is a top priority in most organisations today. Everyone deserves to have the opportunity to look after his or her skin and in the process, look after others. So, where better to start than to teach the adults of tomorrow, our children!

Deb, the worldwide leaders in dispensing technology and skin care, have combined cost-effective features along with an advanced and modern 'eye-catching' design to create SOAPY SOAP.

SOAPY SOAP will help children recognise the importance of washing their hands and make it seem less of a chore with the added value of 'FUN'.

Features and benefits

INSTANT FOAM

Very little water is required to create a rich lather.

QUICK RINSE-OFF

Reduces water consumption and wash-up time. Leaves skin clean.

LOW ACTIVE CONTENT

Foam generated is 20 times the actual volume of cleanser. Less cleansing material than normal is actually in contact with the skin, thereby reducing the possibility of drying or irritation.

LOW VISCOSITY

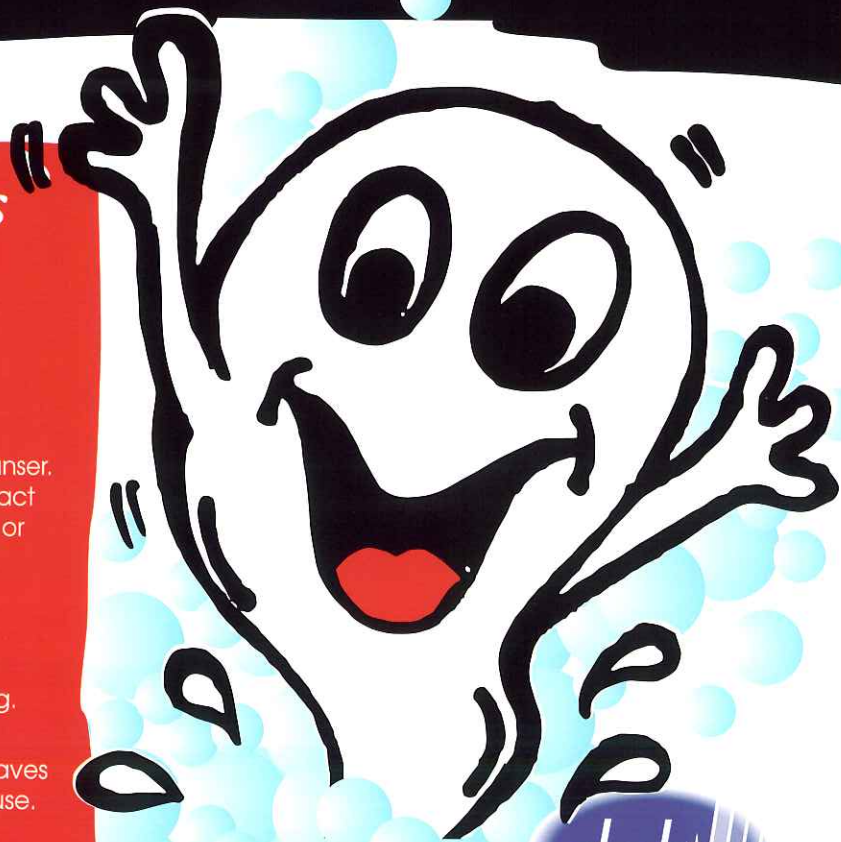

Cartridge drains completely.

LIGHTLY FRAGRANCED

Pleasant during use and suitable for frequent washing.

CONDITIONING

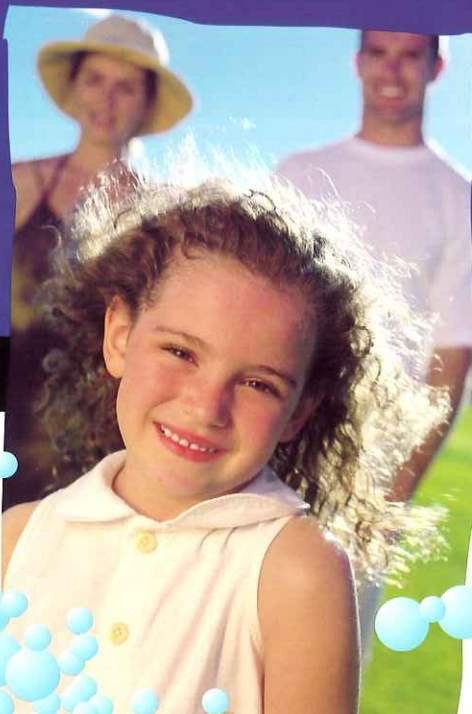

Contains a superfatting conditioning agent which leaves the skin feeling soft and supple, even after frequent use.

The Soapy Soap system

Help your friends
wash their hands

Hygenifoam

Hygenifoam is a quality blend of cleansing and conditioning agents that is aerated as it is dispensed, producing a rich foam rather than a lotion, liquid or gel.

The resulting foam is a full bodied lather which will not run through the fingers, is very pleasant to use and lasts through the hand cleansing process, making the experience of washing effective and enjoyable.

Hygenifoam is mild and kind to the hands, making it suitable for frequent washing locations. An added conditioner gives a luxurious afterwash feel and leaves the skin feeling smooth and supple.

Soapy Soap Dispenser

The Soapy Soap sealed cartridge dispenser has been developed for use in a wide range of industries. It has been designed to minimise maintenance and cost in use, whilst maximising hygiene and convenience.

The pump mechanism does not employ propellants, but forces the cleansing fluid through a fine plastic gauze, creating up to 20 times the volume of liquid from which it is created.

The Soapy Soap Dispenser is suitable for light to medium traffic areas. A new pump supplied with each cartridge, eliminating the probability of product contamination, is an added benefit.

A commitment to occupational skin care

The Deb Soapy Soap System includes an eight part service package to ensure the correct products are installed and used.

- **Initial Evaluation** - to establish your requirements.
- **Product Trial** - to establish user acceptability.
- **Complete Site Survey** - to plan correct installation of a comprehensive skin care programme.

- **Final Proposal** - with recommendations for products, locations and estimated annual expenditure.
- **Installation** - of the recommended skin care programme.
- **On Site Training** - either before or after installation.
- **Full Technical Support** - to provide ongoing advice and help.
- **Local Supply** - through our chain of distributors to ensure the fastest possible service.
